DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat NO 5,857,889 issued to Abbott.
3. Abbott discloses an arc chamber of an ion implanter system (col. 5, lines 48-50).
4. Abbott discloses the walls of said arc chamber enclosure (e.g. housing (50)) made of boron nitride, which is a high temperature ceramic insulating material (col. 5, lines 50-65).
5. Abbott discloses said arc chamber enclosure (50) consisting of an electron emissive source (58) (col. 6, lines 7-11).
6. As per claims 2-4, Abbott discloses boron nitride.
7. As per claim 5, Abbott discloses a substantial portion of the walls (e.g. the entire housing (50)) being formed of an insulator material, i.e. boron material. Abbott, also, discloses that said boron material is selected for its desired insulating characteristics (col. 6, lines 1-3).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US Pat No 5,049,784 issued to Matsudo (see col.3, lines 54-55); US Pat No 5,886,355 issued to Bright et al (col.4, lines 51-60); and US Pat No. 4,719,355 issued to Meyers (col.2, lines 24-27). All the above-cited reference illustrate that the use of boron nitride, a high temperature ceramic insulative material is notoriously known in the art.
